## Transducer Shield and Saver

Are you willing to assume the risk or are you looking for peace-of-mind protection for your electronics' transducer? The transducer is a very important piece to proper sonar function and performance. Impacting the transducer against an underwater obstruction can damage the transducer if not remove it completely. A damaged transducer can leave you without sonar when you need it the most. Many times we blame it as defective equipment but 90% of electronics issues are transducer related and many times these are because we expose the transducer to underwater hazards and impacting these hazards inflicts damage to the vital components inside the transducer: the crystals and wiring. Damage these and you're done.

Well now there is a product that not only offers protection but also looks like it's supposed to be part of your boat. Transducer Shield and Saver offers protection as well as looks good on your trolling motor. Made from cast aluminum it's perfectly matched to provide the protection you need for less than the price of a replacement transducer. For example the price for the Humminbird XTM-9-20T - Trolling Motor Mount Transducer cost \$67.99 and the Transducer Shield and Saver cost \$39.95. Transducer Shield and Saver builds products for Humminbird, Lowrance, Eagle and Garmin and several transducer styles.

**Assembling Diagram**

Transducer Shield and Saver is also a custom builder; making custom mounting products for Humminbird's Side Imaging Sonar. This transducer performs best mounted externally to provide you the highest level of detail. But mounting externally can induce them to damage from the same underwater obstructions plus they need clear views to both sides to send and receive the sonar waves. Many opt to mount on the jack-plate or higher on the transom for protection. Transducer Shield and Saver offers Custom mounting options for mounting to the Jack-plate or boat. And they are willing to work to build the best mounting option for you and are always willing to listen to your protection needs.

Humminbird Side Imaging users have learned the benefits of using Side Imaging on the trolling motor and the Transducer Shield and Saver offer Trolling Motor protection for the Humminbird Side Imaging Transducer both the CompactSi for the 798c and 797c2 plus the larger HDSI transducer for the 997c and 1197c. For a small investment of \$74.95 you can protect the \$233.99 HDSI Transducer from damage.

I have personally been testing this product with my HDSI transducers on the Trolling Motor and the 12" Slidemaster Jack-plate on my Skeeter. And not only were they easy to install and look professionally installed but they provide added protection from underwater hazards and on the jack-plate mounting improved the readings by providing better location to send and receive without any obstruction

s the side sonar sound waves. I've intentionally been pounding the mounts into trees, rocks, the bottom and any think else I can find in the lake to make sure they provide peace-of-mind and assurance that they will provide the highest level of protection to your electronics' transducer. Check out all the great products Transducer Shield and Saver offers at their website [www.transducershieldandsaver.com](http://www.transducershieldandsaver.com) or contact them for the custom application you need.

They even offer Black Powder Coated Hose Clamps for that added Professional Touch!
